received from State Health Authorities. According to epidemiological data received from State Government the incidence of Malaria in these three districts, in regularly showing a declining trend.

(b) The following specific steps are being taken to contain the spread of Malaria in the country including Orissa:

--To contain the transmission of Malaria, residual insecticidal spray is being carried out in areas where Annual Parasite incidence is 2 and above.

—Stress has been laid for regular fortnightly surveillance in all malarious areas of the country.

—Laboratory services have been decentralised at the Primary Health Centre for prompt examination of blood smears and administration of radical treatment without any time lag.

--Drug Distribution Centres and Fever Treatment Depots are functioning in the remote areas of the country to make available anti-malaria drugs to the fever cases.

—To contain P. falciparum strain, a p. falciparum containment Programme is functioning in the problem areas of the country.
